

System and Device Programming

A.Y. 2025-2026

Project's Rules

Projects are subject to the following rules and restrictions:

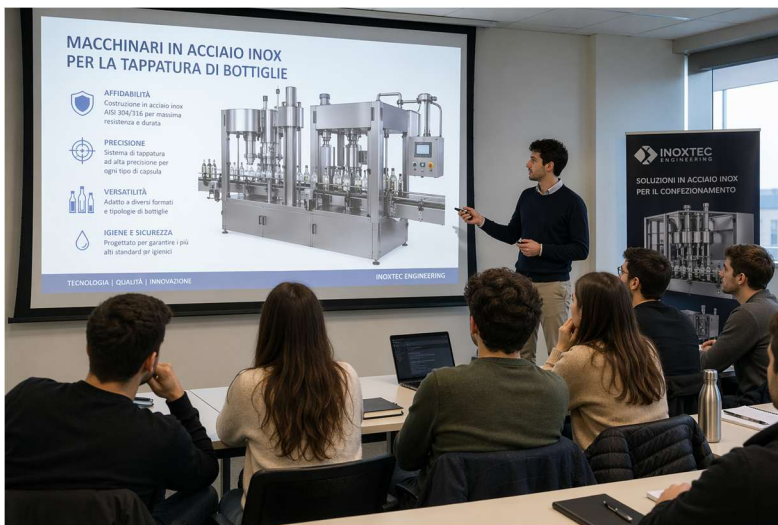

- Projects are optional and not required to pass the exam
 - You can pass the exam only if you pass both written tests.
 - The project mark is added to the written mark and can help you reach 18/30.
- Each student can take a project only once in their curriculum and must start the project before any written exam.
- Each project must be taken by a group of 2 or 3 students.
- Projects will be assigned to groups of students on a first-come, first-served basis.
- All projects taken in 2025-2026 must be completed and delivered before or, at the latest, during the February 2027 exam session. **At the start of the 2026-2027 course, all pending projects will be automatically ruled canceled.**
- The evaluation of each project will follow a short presentation given by the group of candidates during one examination session. To enroll for the presentation, each group must upload the project to the portal page before the written test of that exam session.
- Students must register for the exam in that session, even if they only discuss the project and do not take the written test.
- Each presentation must:
 - Last about 15-20 minutes, possibly including another 20 minutes for questions and answers.
 - Introduce the main ideas, implementations performed, and the results obtained.
 - Report the results obtained on synthetic (homemade) and publicly available benchmarks.
 - Please avoid auto-referentiality (e.g., "our tool is fast", "it uses very little memory", etc.) and instead compare your results with state-of-the-art approaches and references.
- Marks may differ for different students within the same group, depending on the effort they put into the project and the final oral presentation.
- Projects amend the final mark and can contribute to reaching a final grade from 18 to 30. Each project can receive a grade between -2.0 and +6.0 points.
- Once the final mark for a project has been assigned, there is no time limit to its validity.

Unlocking Student Future

AROL Company connects with SDP

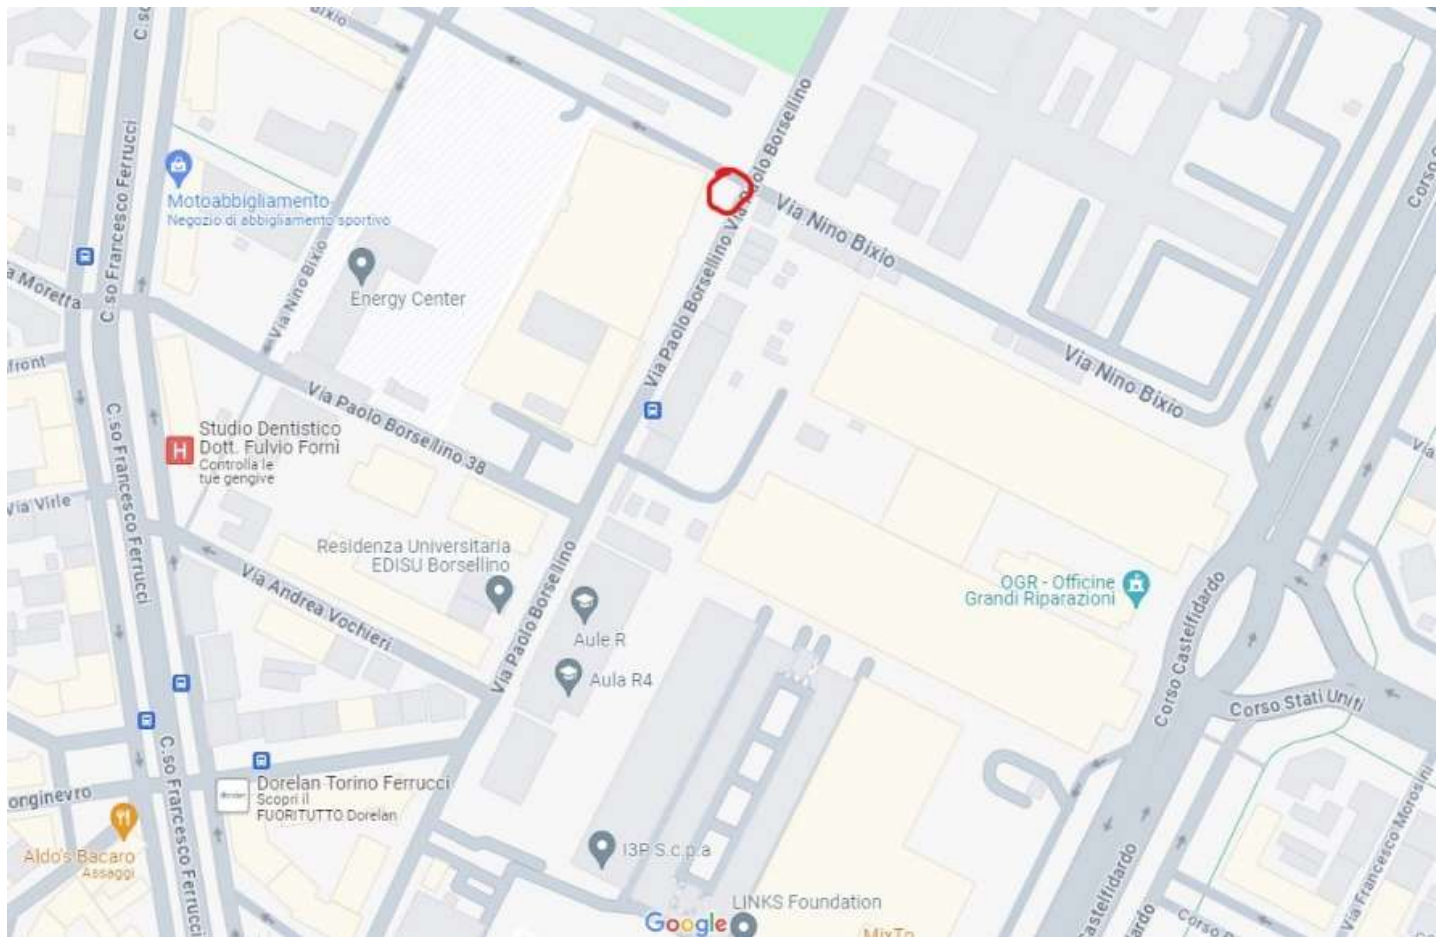

Wednesday 20th May 2026

We plan to organize a visit to AROL's facilities in Canelli (Viale Italia 193, 14053 Canelli, Asti) for a limited number of students participating in a project on Wednesday, the 20th of May 2026. The visit's schedule is reported on the following table.

09.00	Meeting at the corner of Via Borsellino and Via Nino Bixio (behind rooms R). See the red circle on the following map.
09.00-10.00	Transfer by AROL bus to the Canelli site.
10.00-10.30	Welcome by the AROL staff.
10.30-11.30	AROL personnel presentation regarding projects, theses, internships, job roles, required skills and knowledge, etc.
11.30-12.30	Visit to the production plants.
12.30-13.30	Lunch (offered by AROL).
13.30-14.00	Q/A session
14.00-15.00	Return to Politecnico di Torino.

Meeting site (9.00 a.m., Wednesday 20th May 2026):

How to Take a Project and/or Participating in AROL's Visit

To take on a project and/or to participate in the AROL's visit, all students must adhere to the following protocols and deadlines:

- Phase 1, selection
 - **Wednesday the 29th of April.**
 - The instructor presents the rules for taking a project, the main topics available for this academic year, and the visit's schedules and rules.
 - **Monday the 04th of May**
 - Each group of students willing to take a project and possibly to participate in the AROL's visit must upload the file **module.docx** on the portal web page in the **Elaborati** section.
 - Instructions for completing the file are contained in **module.docx** itself
 - Each group of students willing to take a project must fill in the first table.
 - Each student taking a project who also wants to participate in the visit must fill in the second table.
 - Each student can take a project and not participate in the visit, but not vice versa.
 - From zero to all members of a group can participate in the visit.
- Phase 2, tentative assignment
 - **Thursday the 07th of May**
 - The instructors will publish a list of assignments on the portal web page, i.e., a list in which each group will be assigned a single work. They will also publish a list of students who will be taking the visit to AROL.
 - Instructors will try to respect students' preferences and will use a first-come-first-served algorithm, taking into consideration the CV of each student, the AROL limitations, and a proper balance between the workload of the different instructors.
- Phase 3, final assignment
 - **Monday, the 11th of May**, each group will have the opportunity to accept or reject the final assignment and, eventually, **but only in particular cases**, to select a different one:
 - No action will be necessary to accept the project.
 - Rejecting (or changing) the project will be possible during a discussion (either online or offline) with the instructors.
 - **Students selected for the visit are strongly expected to attend, since AROL must organize the visit based on the exact number of participants.**
